
(a) binned median residual, universal fits (L1); band: RAR 16-84% of points
$\log_{10}(g_{obs}/g_{model})$ [dex]
g_{bar} [m s^{-2}]
RAR, $g_\dagger$ = 1.12e-10
constant $|\gamma_1|/2$ = 2.27e-11
form B: $g_{bar} + \sqrt{g_{bar} a_{acc}}$ = 7.72e-11
form S: $\frac{g_{bar}}{2} + \sqrt{\frac{g_{bar}^2}{4} + g_{bar} a_{acc}}$ = 1.10e-10
(b) slope of log Δg in the shaded range: data 0.44, RAR 0.45, S 0.45, B 0.50, constant 0
$\Delta g = g_{obs} - g_{bar}$ [m s^{-2}]
g_{bar} [m s^{-2}]
points with $g_{obs} > g_{bar}$
binned median
RAR, $g_\dagger$
constant $|\gamma_1|/2$
form B: $g_{bar} + \sqrt{g_{bar} a_{acc}}$
form S: $\frac{g_{bar}}{2} + \sqrt{\frac{g_{bar}^2}{4} + g_{bar} a_{acc}}$
