A superposition kept longer than the line would show Bridge B.
Existing ones fall short by factors of 1e12 to 1e16.
Bridge B coherence time, silica sphere
Bridge B coherence time, gold sphere
existing superpositions (observed coherence)
BMV proposal: 1e-14 kg needs 8-25 s;
Bridge B decoheres it in 12 ms (on the line)
Cs-133 atoms held 20 s
Rb-87 atoms, 54 cm
Na clusters, 197 kDa
Oligoporphyrins, 28 kDa
time, s
mass, kg
